

# Qualify

A complete Application Quality Management solution that unites requirements, cases, test execution, defect management and reporting within one platform.

Original Software

**With Qualify, you have a single point of reference for all of your Application Quality Management needs. With fully configurable graphical dashboards, class leading integrated communication channels and multi format reporting, you now have all the information you need to manage quality processes and make truly informed decisions.**

## Meet quality management challenges

A coherent planning and management platform is a key success factor in the adoption of any quality enhancement project. Unless the current extent and success of testing can be properly managed and measured success will be an up-hill struggle. Attempting to deliver quality process improvement and reducing time to market without a suitable solution can lead to:

- Inefficient testing due to poor knowledge, limited communications and a lack of a well defined process.
- Increased risk of poor quality.
- Low team morale due to moving deadlines, mixed priorities and vague leadership.
- Hours spent compiling reports that are out of date before they are finished.
- Poor management visibility of project status and progress which could result in missed deadlines, and rushed testing.

## Qualify At a Glance

### Mapped to Your Business and Processes:

Qualify has been designed by QA professionals to deliver a best of breed solution which fits your business and helps you optimise your processes. Choose what information you want to store and see, and have full control over screen layout.

**Graphical Dashboards:** Clear graphical dashboards can be configured to suit your needs. Choose the key metrics you want to monitor. Each metric has full drill down functionality for greater analysis and clarity.

**Integrated Communications:** Our unique 'notifier' alert function enables you to receive minute by minute updates when user defined limits are breached. Project information can also be shared using email.

**Print What You See:** Full reporting engine is easy to use with multiple outputs formats including HTML and PDF.

**Industry Standard Security:** Qualify offers full granular access control based on a roles model.

**Facilitate Agile development.** Take advantage of new techniques such as exploratory testing and support your Agile development throughout the quality lifecycle.

**Full Compliance at your fingertips.** Full historical records are available for every project, modification and test performed, allowing for complete audit trails.

## Qualify: The Cornerstone of Application Quality Management.

Qualify has been specifically designed to address your quality management challenges and enable you to use application quality as a core differentiator for your business. By providing a corporate-wide platform for consistent, repeatable and standardized processes, Qualify can help you reduce risk, deliver higher quality applications and improve application time to market.

### Your Language, Your Processes, Your Results.

Qualify is configured to match your business processes. (e.g. requirements, enhancements, test cases, work requests, estimates, defects, (or any other items you can think of). Choose what information you want to store and see, name everything the way you want and have full control over data presentation.

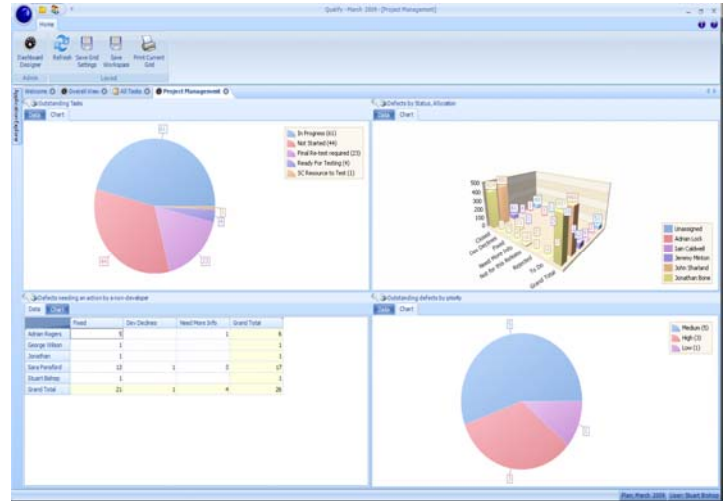

### Integrated Communication and Collaboration.

Make Qualify your communication backbone and allow QA teams, developers, business analysts and management to centrally manage and monitor all manual and automated testing assets, as well as communicate and collaborate throughout the quality lifecycle over one single platform. To aid efficiency there is a unique 'notifier' which gives you automatic updates whenever a user defined rule is met, for example when someone logs a defect for your attention. Project information can also be delivered via email, with or without attachments.

### Auditing, Reporting and Analysis.

Once a test has completed you can attach the results to the test task, providing ready access to diagnostic data and creating a full audit trail so that the depth of coverage can be rapidly understood. These results can be viewed at any time to assist in management reviews or as part of the audit/compliance process.

A 'print what you see' reporting engine enables enhanced printing capabilities with multiple output formats including HTML web page and PDF.

Dashboard view in Qualify

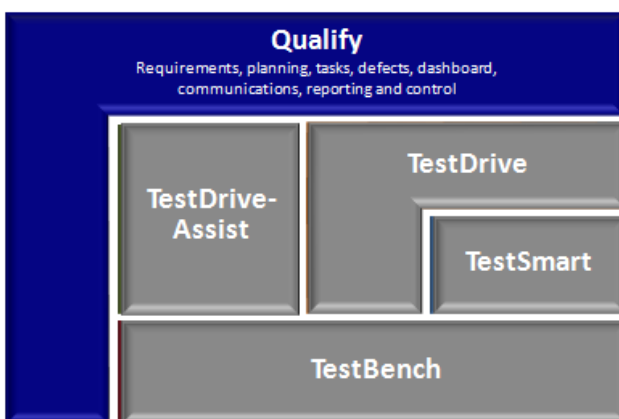

### Execute Automated and Manual Tests

If Qualify is implemented as part of a total quality solution including TestDrive and/or TestBench it can act as a workbench for everybody involved in the quality assurance process. Any executable component such as an automated test or an Action Map can be executed directly from within Qualify giving direct access across projects and test cases to the relevant team or individual.

To support exploratory testing, any Qualify items such as tasks or defects can be created direct from TestDrive-Assist, our specialist manual testing solution. This configuration uniquely provides a platform to support Agile development and testing.

### Customizable, Real-Time Management.

Qualify has been designed to be a hub for real-time control of the entire Application Quality Management process. Graphical dashboards make Key Performance Indicator (KPI) monitoring easy. Each user can have their own unique dashboard so they can monitor what is important to them. What's more, with fully configurable data definitions there are limitless ways you can view the data. You now have clear visibility of how your projects are running and can more tightly manage the application release.

The Cornerstone of Application Quality Management

*"IT and the business are now more closely aligned and working as a partnership to drive the business forward. The Original Software team are very approachable, understand our needs and are knowledgeable about how to get the most out of an improved test process - it has been a good partnership."*

Tim Aitkinson, CIO, Reliance Security Services
